

Sri Krishna Yamana

Cloud Data Engineer (Google Cloud)

Email: yamana.srikrishna14@gmail.com

Phone: +91-8688254158

Carrier Objective:

I am actively searching for a dynamic company that values personal and professional growth. My objective is to join an innovative team where I can utilize my technical expertise to contribute to the achievement of the organization's objectives and make a meaningful impact on its success.

PROFESSIONAL SUMMARY:

- ✚ Data Engineer with 5+ years of experience in designing and building scalable data pipelines on Google Cloud Platform. Proficient in BigQuery, Google Cloud Storage, and Apache Airflow for data ingestion, transformation, and orchestration.
- ✚ Experienced in working with large-scale data processing using SQL, Python, and PySpark, along with handling diverse file formats such as CSV, JSON, and Parquet. Strong expertise in data modeling, performance optimization, and implementing data quality checks.
- ✚ Familiar with Snowflake, Kafka, and Hadoop ecosystem, with hands-on experience in version control using Git and working in Agile environments. Proven ability to troubleshoot production issues, automate workflows, and collaborate effectively across teams.

TECHNICAL EXPERTISE:

Google Cloud Platform (GCP)	GCS, BigQuery, Airflow, Data Proc, Dataflow
Scripting Languages	SQL, Python
Project Execution Tools	Agile – JIRA, Confluence, Git, GitHub
Data Formats	CSV, JSON

EDUCATION:

- B.Sc. Computers from Krishna University, Vijayawada in 2019

PROFESSIONAL EXPERIENCE:

Project#3:

Organization: HCL

Duration: Nov 2025 to Mar 2026

Role: Lead Engineer

Key Responsibilities:

- ✚ Managed and monitored end-to-end data pipelines on Google BigQuery, ensuring seamless data flow from various sources to RZ, PZ, and fact layers.
- ✚ Performed data validation, reconciliation, and RCA for production issues, ensuring data accuracy and resolving pipeline failures within SLA.
- ✚ Automated data quality checks and supported ingestion workflows using Apache Airflow, improving pipeline reliability and reducing recurring incidents.
- ✚ Investigated missing or delayed data issues in fact tables and coordinated with upstream teams for data reprocessing.

- ✚ Collaborated with cross-functional teams and maintained documentation for pipelines, data flow, and troubleshooting steps during KT and transition phase.

Project#2:

Organization: HCL

Duration: Nov 2023 to Jan 2025

Role: Senior Software Engineer

Key Responsibilities:

- ✚ In my role as a Data Engineer, I've achieved success in developing streamlined scripts for the seamless transfer of data from Google Cloud Storage (GCS) to BigQuery. I took a proactive approach to data organization within BigQuery, implementing partitioning strategies to enhance performance and data management.
- ✚ I bring extensive experience to the table when it comes to designing and executing data integration solutions within the Google Cloud Platform (GCP), harnessing the power of services like Cloud Storage, Dataflow, Pub/Sub, and BigQuery.
- ✚ Through a deep understanding of business requirements, I meticulously analyzed and structured raw data to align it with specific needs. I possess proficiency in handling large-scale data processing and analytics using technologies such as Apache Beam, Apache Spark, and Google Cloud Dataflow.
- ✚ To drive organizational goals, I've established well-structured BigQuery datasets, tables, and pipelines for efficient data storage and processing. I skillfully utilized Google Cloud Shell to facilitate the smooth and reliable transfer of data from GCS to BigQuery.
- ✚ Managing diverse file formats like CSV, JSON, and AVRO came naturally to me, and I adeptly handled data in these formats to meet the requirements of downstream applications.
- ✚ I also prioritized data security and access control by creating authorized views in BigQuery, ensuring that the right stakeholders had access to the necessary data.
- ✚ To maintain version control and foster collaboration, I effectively employed GitHub as the Source Code Management tool, enabling seamless code management and deployment.
- ✚ Additionally, I maintained clear and concise documentation for data pipelines, data models, and architectural decisions to facilitate knowledge sharing and team collaboration.

Project#1:

Organization: WV AUTOMATION PRIVATE LIMITED

Duration: Aug 2019 to Oct 2023

Role: Software Engineer

Key Responsibilities:

- ✚ I have demonstrated my proficiency in crafting intricate SQL queries for data retrieval, manipulation, and updates within databases. My experience extends to designing and optimizing database structures, encompassing tables, indexes, and constraints, to ensure efficient data storage and retrieval.
 - ✚ Furthermore, I possess a strong aptitude for identifying and resolving performance bottlenecks by scrutinizing query execution plans, optimizing indexes, and implementing query enhancement strategies. My expertise includes creating both logical and physical data models that effectively represent business requirements, resulting in well-organized database structures.
 - ✚ Additionally, I am proficient in developing stored procedures, user-defined functions, and triggers to encapsulate crucial business logic within the database. I leverage these capabilities to provide valuable insights from extensive datasets, facilitating informed business decision-making.
 - ✚ Furthermore, I've contributed to the implementation of GCP architecture for comprehensive cloud-based big data solutions, leveraging tools such as BigQuery, Google Cloud Storage (GCS), Dataflow, and Airflow.
 - ✚ This revised version highlights your SQL expertise, database design skills, performance optimization abilities, data modeling proficiency, and adds the mention of Python and PySpark for data processing.
 - ✚ Proficient in utilizing Python for data automation tasks, I've developed scripts to streamline data processing, data cleansing, and data transformation operations. Python's versatility has allowed me to create custom solutions that enhance data quality and efficiency.
-
